(AAT01082) isolated from a human epidermal carcinoma cell line A431 cDNA library. The enzyme can be expressed in the milk of a transgenic mammal, esp. cow. This allows large-scale prodn. of oligosaccharides or glycosylated proteins and lipids in the milk.
                                                                                                                                                                                                                                                                                                                                                                              Redn. of rejection of xenogeneic cells following transplantation by introducing a vector expressing fucosyl:transferase into the cells

             The human H-transferase (AAR90572) product of a cDNA clone (AAT12238) prepd. from human epidermoid carcinoma cells (ATGC CRL 155 A-431) can be expressed in xenogeneic organs, tissues and cells using a vector such as pAPEX-1 (AAT12239). This results in decreased expression of the non-human antigen galactose alpha(1,3) galactose reduced upon transplantation to humans.
                                                                                                                                                                                                                                                                                     AALAPVFRITLPVLAPEVDSRTPWRELQLHDWMSEEYADLRDPFLKLSGFPCSWTFFHHL 177

ells, the enzyme human GDP-Livose:beta-D-galactoside 2-alpha-L-fucosyltransferase (also called alpha 1,2 FT) or human GDP-L-fucose:beta-D-galactoside 2-alpha-L-fucosyltransferase (also called alpha 1,2 FT) or human GDP-L-fucose: beta-D-N-acetylglucosamide 3/4-alpha-L-fucosyltransferase (also called alpha 1,3/4 FT). The enzyme is expressed under the control of agut epithelial cell-specific promoter and Helicobacter pylori adhers to the transgenic cells. The transgenic mouse and intestinal epithelial cells from it are useful as models for screening compounds for the ability to inhibit adhesion of H. pylori to gut and was published by Larsen et al., Proc.Natl.Acad.Sci.USA, 87: 6674-6678 (1990).

Human GDP-Fuc:beta-D-galactoside alpha(1,2)-fucosyltransferase (AAW13640) is an enzyme involved in the expression of type I and II blood group is tructures. Its amino acid sequence was deduced from an isolated DNA (AAT61677) derived from human A431 cells. Expression of the fucosyltransferase animal cell lines provides specific capabilities with respect to post-translational modification of the oligosaccharides of expressed proteins or lipids. Specific applas. Of the enzyme include enzymatic fucosylation of chain-terminating galactose residues on lactoseamine or neolacto type beta-D-galactoside to alpha-2-fucose residues. The enzyme can also be used to raise antibodies as diagnostic reagents and to screen cpds. for fucosyltransferase inhibitor activity.
                                                                                                                                                     New recombinant fucosyltransferase proteins - useful for modifying cell surface oligosaccharide structures
                                                                                                                                                                                                               Example 1; Page 280-281; 329pp; English.

Sequence 8, Application US/0999672;
Patent No. US2002012/655A1
GENERAL INFORMATION:
APPLICANT: EIL H. HOLMES et al.
TITLE OF INVENTION: MAI-SPECIFIC ALPHAL-2 FUCOSYLTRANSFERASE AND USES;
TITLE OF INVENTION: THEREOF;
FILE REFRENCE: 8511-029
CURRENT APPLICATION NUMBER: US/09/999,672
CURRENT FILING DATE: 2001-10-31
PRIOR APPLICATION NUMBER: US/09/298,886
PRIOR FILING DATE: 1999-04-26
NUMBER OF SEQ ID NOS: 29
SOOTWARRE: PATENTIN VEY: 2.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        181 PSTFVGVHVRRGDYVHVMPNVWKGVVADRGYLEKALDMFRARYSĠPVFVVTSNGMAWCRE 240

Sequence 10, Application US/09999672

Sequence 10, Application US/09999672

Sequence 10, Application US/0999672

GENERAL INFORMATION:

APPLICANT: Eric H. Holmes et al.

TITLE OF INVENTION: NUCLEIC ACIDS AND PROTEINS OF A RAT GANGLIOSIDE

TITLE OF INVENTION: GM1-SPECIFIC ALPHA1-2 FUCOSYLTRANSFERASE AND USES

TITLE OF INVENTION: THRREOF

FILE REFERENCE: 8511-029
                                                                                                                                                                                                                                          APPLICANT: Eric H. Holmes et al.

J. 327:105-115(1997).

2. I CATALYTIC ACTIVITY: GDP-L-fucose + beta-D-galactosyl-R = GDP + alpha-L-fucosyl-1,2-beta-D-galactosyl-R.

2. I CATALYTIC ACTIVITY: GDP-L-fucose + beta-D-galactosyl-R = GDP + alpha-L-fucosyl-1,2-beta-D-galactosyl-R.

2. I CATHWAY: Glycosylation.

2. I SUBCELLULAR LOCATION: TYPE II MEMBRANE PROTEIN. MEMBRANE-BOUND CONTRIBUTION TRANS CISTERANE OF GOLGI.

2. I TISSUE SPECIFICITY: IN THE ADULT, HIGHLY EXPRESSED IN PANCREAS, TESTIS AND EPIDIDYMIS AND TO A LESSER SYMENT IN THYMUS, LUNG, STONACH, SMALL INTESTINE, COLON, SPLEEN AND UTERUS. NOT EXPRESSED IN BRAIN, HEART, SKELETAL MUSCLE, KIDNEY, LIVER AND BONE MARROW.

2. MISCELLANGOUS: THERE ARE TWO GENES (FUTI AND FUT2) WHICH ENCODE GALACTOSIDE 2-L-FUCOSYLTRANSFERASE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       entities requires a license agreement (See http://www.isb-sib.ch/announce/or send an email to license@isb-sib.ch).

Commun. 238:21-25(1997).

-! FUNCTION: CREATES A SOLUBLE PRECURSOR OLIGOSACCHARIDE FUC-ALPHA SUBSTRATE FOR THE FINAL STEP IN THE SOLUBLE A AND B ANNIGAL SUBSTRATE FOR THE FINAL STEP IN THE SOLUBLE A AND B ANNIGAL SUBSTRATES BUT EXHIBIT DIFFERENT KM VALUES.
-! CAPALYIC ACTIVITY: GDP-L-fucose + beta-D-galactosyl-R = GDP + Albhar-Loosyl-R.

THEY ARE EXPRESSED IN A TISSUE-SPECIFIC MANNER WITH EXPRESSION RESTRICTED TO CELLS OF MESODERMAL OR ENCODERMAL ORIGIN RESPECTIVELY.

SIMILARITY: BELONGS TO THE GLYCOSYLITRANSFERASE FAMILY 11.
                                                                                                                                                                                                                           VARIANT HIS-164.
